Re: Grip/Tripwire Systems

David,

I have worked on fighting graffiti both as a law enforcement officer, and as the head of this non-profit for over 25 years. What I can tell you is that most cities rely on graffiti removal as their whole anti-graffiti program, trouble is, graffiti removal does nothing about actually stopping the problem. The only proven way to stop graffiti is to catch them in the act and get them into the court system where some controls can be placed on them.

This system you have developed to collect the data on vandals and locations has been proven to stop actually stop graffiti. As you know, the last city that put this in place reduced their graffiti problem by 87% and arrested 80% of that cities prolific graffiti vandals, all of it done in just a three month span. That city save over 75% of its annual graffiti budget, so not only does the graffiti stop, it also saves city budgets as well as your tax dollars. I have used every other anti graffiti system on the market, and yours is the only one that actually does what it says it will do, actually Stop Graffiti! This system you have does so many things and not only alerts police to the crime in progress, it provides them with real time photographic evidence of the crimes. I know from experience in running operations to try and capture vandals, it was near impossible without huge cost, but now, with this equipment and trusted volunteers, running these operations cost nothing at all. If you have cities that still have not made a decision to use your equipment, have them contact me and I will be happy to layout all the other systems that DO NOT work and that they all cost much more than your system.
